As part of its project to expand its activities into North America, RFI has signed an agreement with CJFO-FM, a francophone radio station broadcasting in Ottawa at frequency 94.5 FM. As of August 29, CJFO-FM will be broadcasting live Monday to Sunday two ten-minute programs in French, at 10:00 am and 10:00 pm local time.

In addition, RFI will make its French-language magazine programs and its musical programs available to CJFO-FM.

RFI French-language programs are also broadcast in Canada 24 hours a day through packages offered by Shaw Direct, Bell Satellite, Bell Fibe, Telus, Vidéotron, Cogeco Québec, Dery Telecom, Sogetel, CTC and CTL.

Radio-Canada also broadcasts an RFI news program in French, Monday through Friday, on FM radio across the country.

About RFI (www.rfi.fr)

RFI is a leading French-language, international news radio station. It broadcasts non-stop, 24 hours a day, 7 days a week around the world, in 13 languages, on FM, cable, satellite, Internet and telephone networks. Thanks to its Paris-based offices and its unique network of 600 correspondents, RFI provides its listeners with long news programs and magazine programs with a truly global view of the world.

About CJFO (<http://cjfofm.com>)

CJFO, a francophone community radio in Ottawa, was launched on November 15, 2010 with the goal of serving the francophone population in the national capital region.

“Broadcasting of the RFI news and music on CJFO radio is a result of the

repeated requests by our listeners. There are 400 000 francophones and francophiles who would be interested in the broadcasts of international news that come from sources other than those Canadians already know,” said Mr. Lucien Bradet, the president of the Francophone Community Radio in Ottawa. CJFO broadcasts a variety of music from different regions in Canada and will specialize in the broadcasting of shows popularizing history, sciences and literature.

The launching of CJFO sets a precedent for Canada’s capital region, and CJFO will be the last radio station to be able to broadcast in Ottawa since there are no more available radio frequencies in the region.
